Abstract of JP 10295706 (A)

PROBLEM TO BE SOLVED: To provide a mouth guard giving a fine feeling of use, reducing the sense of incompatibility when the mouth guard is used and receiving shock from the outside well-balancedly. **SOLUTION:** This mouth guard is integrated with a frame wearable onto a dentition of maxillary teeth and mandibular teeth in a movably fitted state, comprising an outer wall 1 and an inner wall 3 and having an H-shaped section, after a gap between the frame and the dentition is filled in with an impression agent to form the dentition. The frame part has a hardness value of 75 to 90 when measured according to JIS K6301, and the impression agent part has a hardness value lower than the hardness value for the frame by 20 to 50.
